

Reathi Gallery Complete System Test and User Manual

Production-readiness evidence and a practical guide for daily textile POS operations.

117	36	230	12	0
TOTAL TEST CASES	AUTOMATED TESTS	ASSERTIONS	BUGS FIXED	CRITICAL ISSUES REMAINING

READY FOR PRODUCTION

Subject to final hosting, HTTPS, SMS gateway, and off-site backup configuration.

System: Reathi Gallery Textile Commerce Suite **Test date:** 21 August 2026 **Tested version:** 2026.08.21-audit

Prepared from the current working application, its live database structure, automated Laravel tests, production build, dependency audits, and real browser screenshots.

Document map

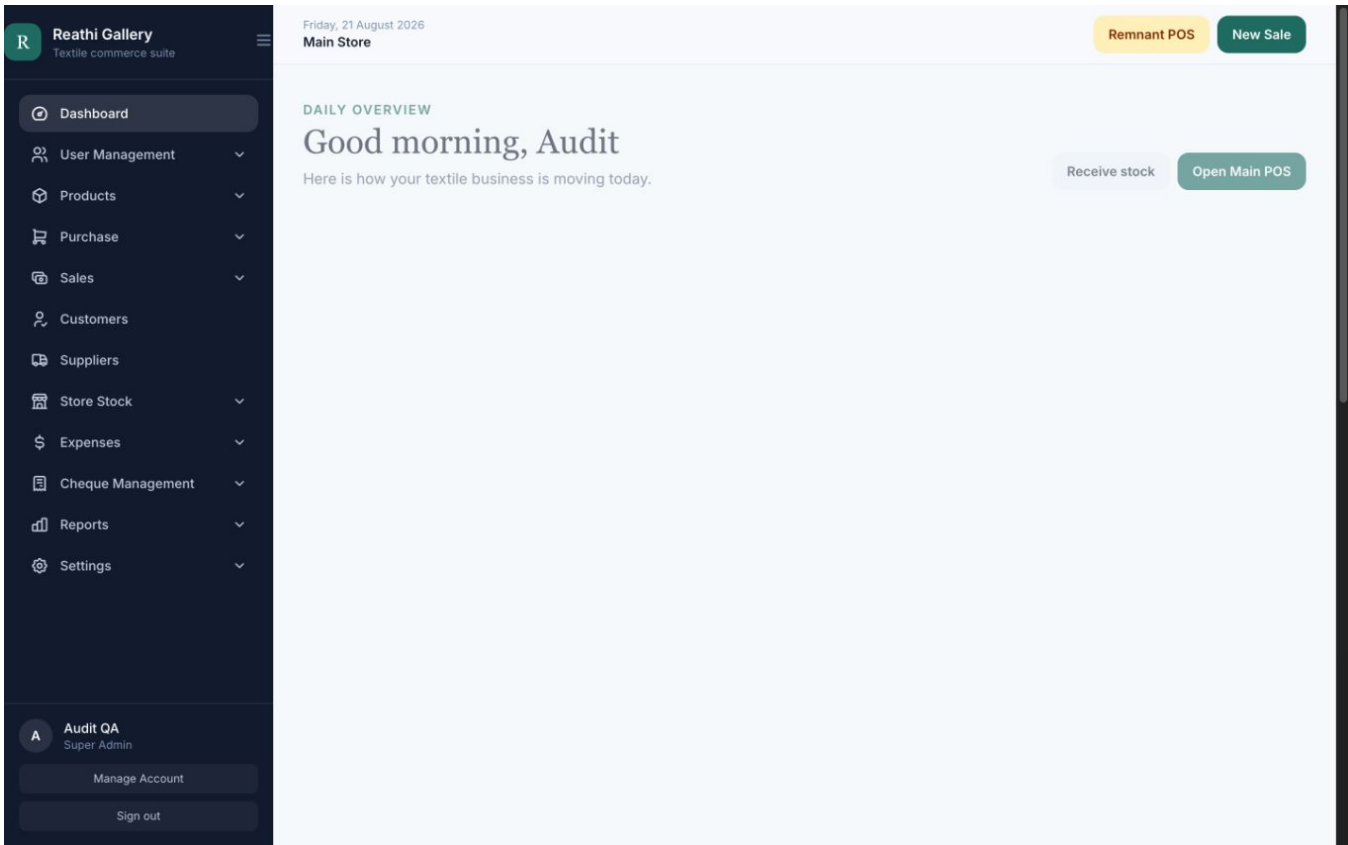

PART	CONTENT	WHAT YOU WILL FIND
Part A	System Test Report	Executive results, defect fixes, permissions, finance, stock, cheques, security, responsive checks, and release decision.
Part B	Complete User Manual	Simple operating instructions for all 39 requested areas with real application screenshots.
Workbook	Detailed Test Evidence	The companion Excel report contains 117 test cases, the full 109-permission matrix, and verification ledgers.

Evidence method: TEST -> FIND ERROR -> FIX -> RETEST -> REGRESSION TEST -> DOCUMENT.

PART A

System Test Report

A transparent summary of what was verified, what failed initially, how it was corrected, and what remains for deployment operations.

Executive summary

Metric	Result	Interpretation
Total evidence-backed test cases	117	Automated, screen smoke, responsive, database integrity, and security checks.
Automated Laravel tests	36 / 230 assertions	All passed in the final regression run.
Initial defects recorded	11	All root-caused, corrected, and retested.
Final failed / blocked	0 / 0	No known high or critical application defect remains.
Permissions	109	Database-driven and grouped across five default roles.
Dependency vulnerabilities	0	Composer and npm audits report no known advisories.
Database integrity exceptions	0	Ten production-like read-only consistency checks returned zero exceptions.

Production-readiness decision: READY FOR PRODUCTION for the tested application code and database. Before public go-live, operations must configure the final HTTPS domain, production web server, real SMS gateway credentials, and off-site backup destination.

Modules and test layers

Authentication	Users/Roles	Products/Units	Purchases	Sales/POS
Main Inventory	Remnants	Customers	Suppliers	Expenses
Cheques	Returns	Reports	Settings	Invoice/PDF

Layer	Verification
Application behavior	36 automated tests and 230 assertions.
Page availability	46 authorized primary screens rendered successfully.
Authorization	UI visibility, route middleware, controller checks, and 403 direct-URL tests.
Responsive behavior	Six major pages at desktop, tablet, and mobile dimensions with width checks and screenshots.
Database correctness	Uniqueness, orphan, negative quantity, total equation, and overpayment checks.
Build and supply chain	Production Vite build, Composer audit, npm audit, cached routes/views.

Defects found, fixed, and retested

ID	Description	Severity	Final
BUG-001	Create-product route captured by show route	High	FIXED
BUG-002	Purchase service cost-key regression	High	FIXED
BUG-003	Raw Alpine component source rendered on page	High	FIXED
BUG-004	Missing Alpine collapse plugin warnings	Medium	FIXED
BUG-005	CSP blocked eval-based JavaScript	High	FIXED
BUG-006	Hidden required modal field blocked submit	High	FIXED
BUG-007	Inventory last-sale aggregate caused MySQL 500	High	FIXED
BUG-008	Low-stock report non-portable HAVING query	High	FIXED
BUG-009	Stale BrandController route broke route listing	High	FIXED
BUG-010	Supplier Due report and PDF missing	Medium	FIXED
BUG-011	Eight placeholder redirects remained	Medium	FIXED
BUG-012	Login page exposed default setup credentials	High	FIXED

Every fixed item was followed by a related test or live browser retest. The companion workbook contains root cause and fix detail.

Accuracy, permissions, and security summary

	109 permissions; 5 default roles; restricted custom-role direct URL tests returned 403.
	Piece/dozen and meter/yard conversions, weighted average cost, immutable sale cost snapshots, loss sales, and due formulas passed.
	Purchase, sale, return, transfer, remnant conversion, balance uniqueness, and last-sale reporting passed.
	Receive, pass, double-pass prevention, return, endorsement, and due restoration scenarios passed.
	CSRF, authentication, active-user check, route/controller authorization, CSP-safe JavaScript, credential-hint removal, and dependency audits passed.
	No page-level horizontal overflow at 1440x900, 820x1180, and 390x844 on six critical pages; POS uses a phone-friendly card layout.

Production release checklist

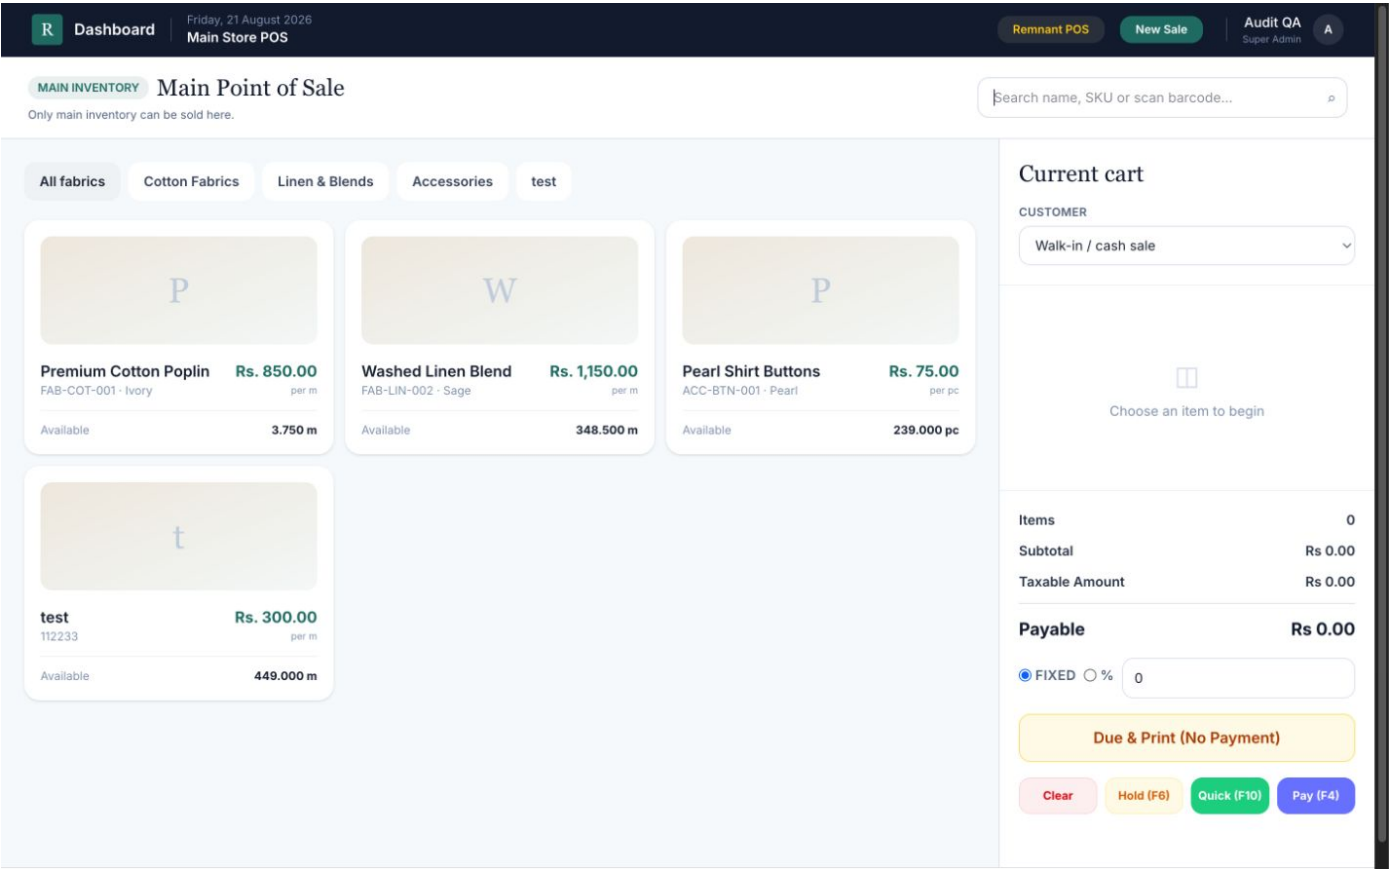

Item	Status	Owner / action
Application tests and regressions	PASS	No action.
Database migrations and permission seed	PASS	Run migrations once on the target environment.
Production environment and debug disabled	PASS	Keep APP_ENV=production and APP_DEBUG=false.
HTTPS domain and web server	REQUIRED	Operations must configure the final domain, TLS certificate, document root, and proxy headers.
SMS gateway live send	REQUIRED BEFORE ENABLE	Use the real provider account for one controlled delivery test.
Off-site encrypted backup	REQUIRED	Configure schedule, retention, monitoring, and a restore drill.
Error monitoring and uptime	RECOMMENDED	Connect production alerting after deployment.

Release decision: The application is ready for production deployment. The required items above are environment and operational prerequisites, not unresolved application defects.

PART B

Complete User Manual

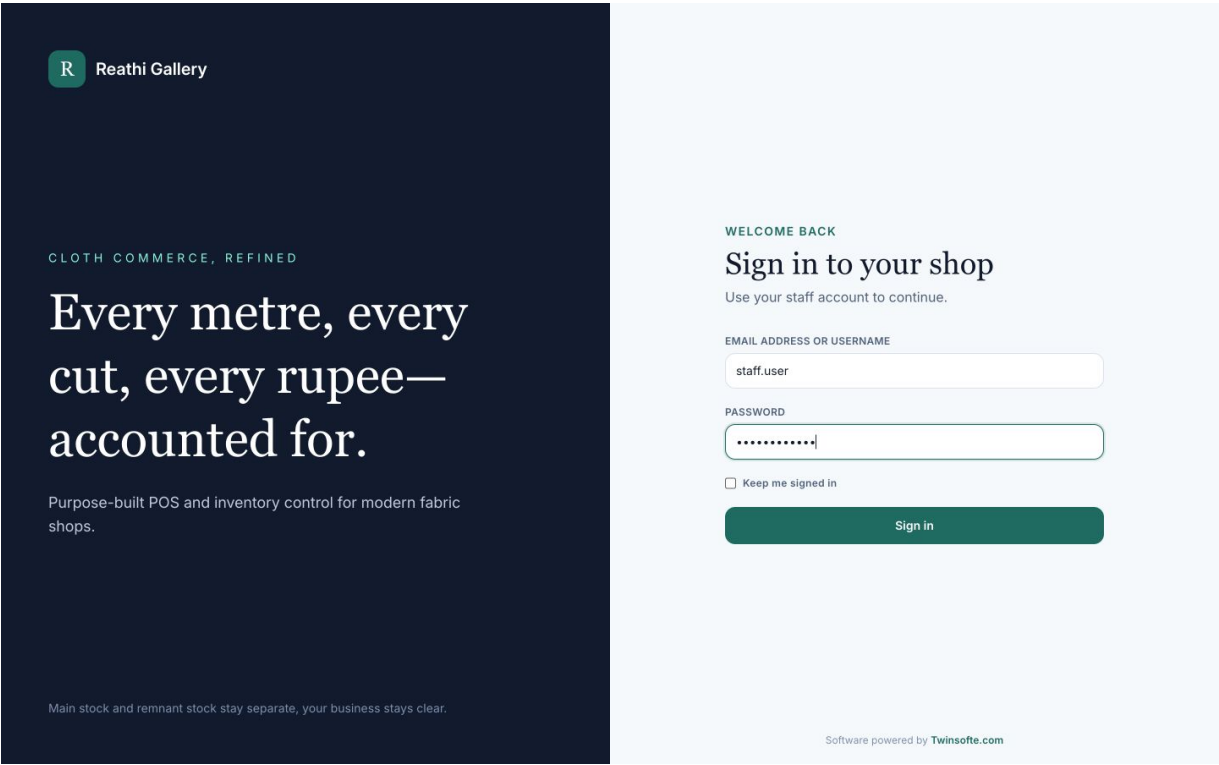

Simple daily operating instructions for administrators, cashiers, managers, and storekeepers.

1. Login

What this page does	Sign staff into the system securely.
How to use it	Enter your assigned username or email and password, then select Sign in.
Important notes	Do not share credentials. Ask an administrator to deactivate lost or unused accounts.

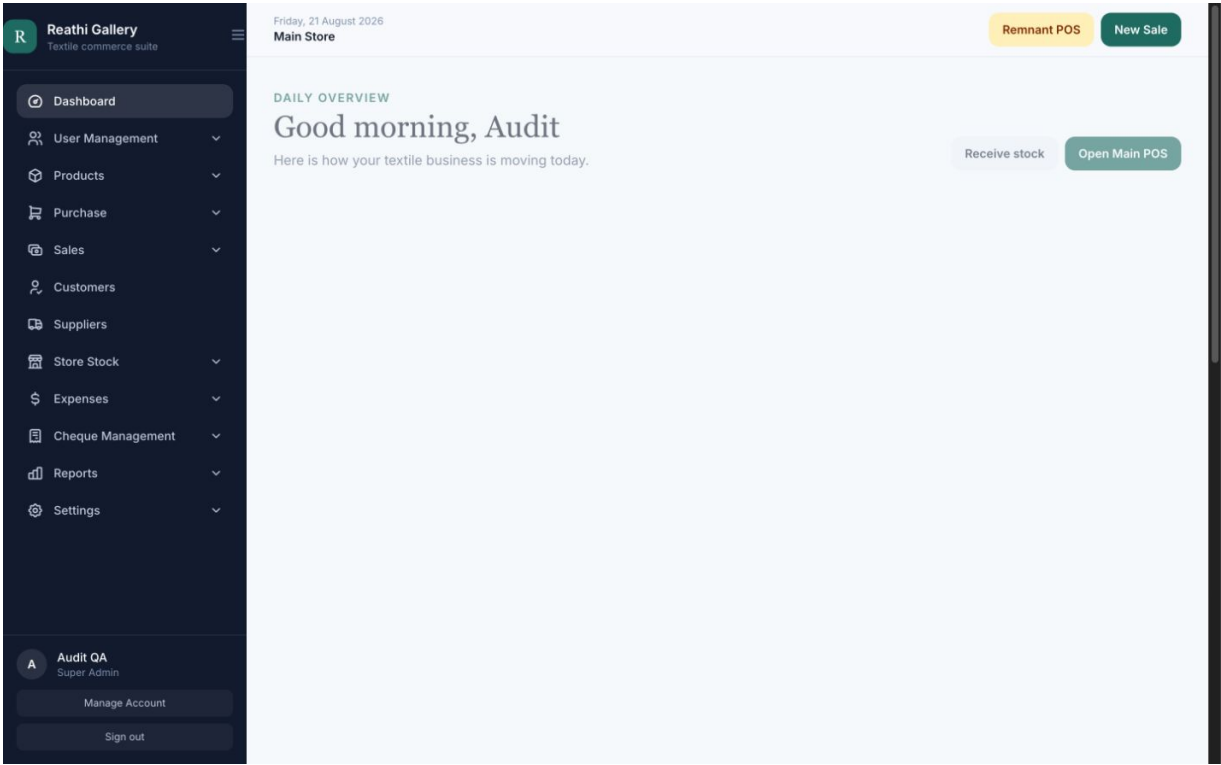

Current application screenshot

2. Dashboard

What this page does	Shows today's business, stock, due, cheque, and profit indicators allowed by your role.
How to use it	Review the overview cards and use the shortcut buttons to receive stock or open POS.
Important notes	Figures come from real transactions. Cost/profit cards are hidden without permission.

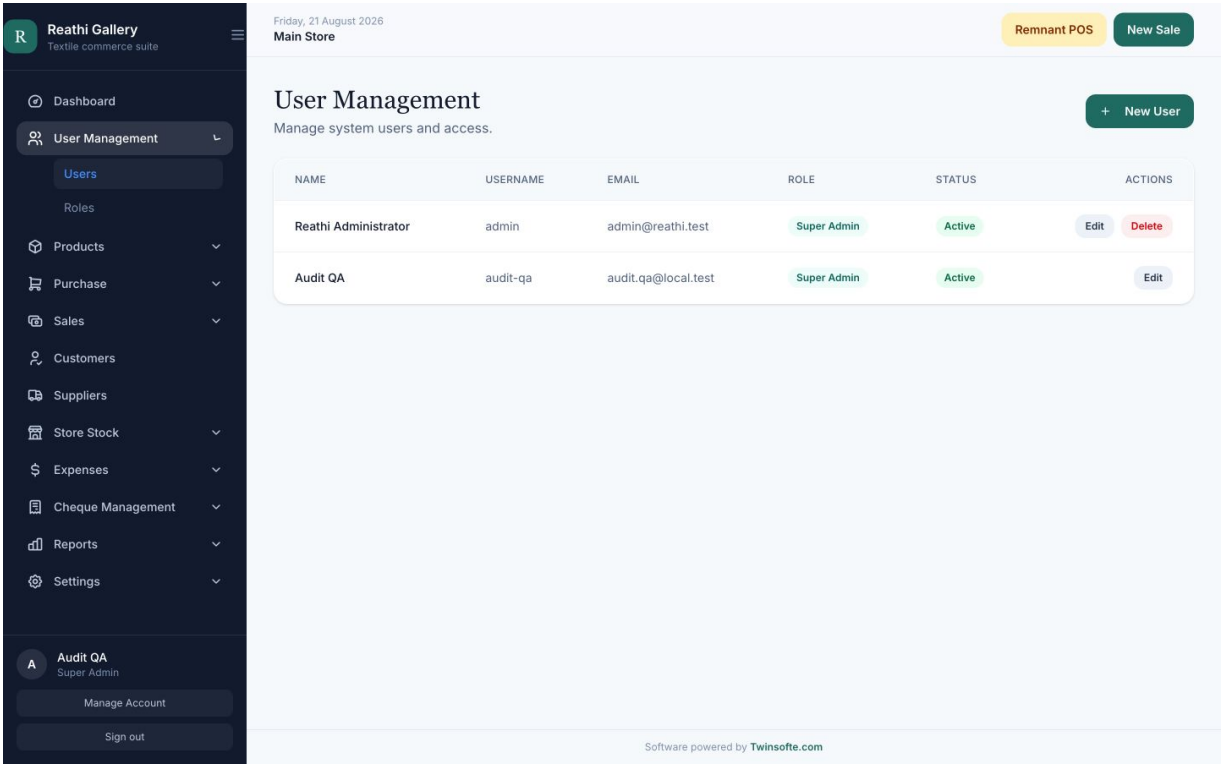

Current application screenshot

3. User Management

What this page does	Lists staff accounts and their assigned roles.
How to use it	Open User Management > Users. Search, edit, activate/deactivate, or delete when allowed.
Important notes	Use roles instead of giving broad access to every user.

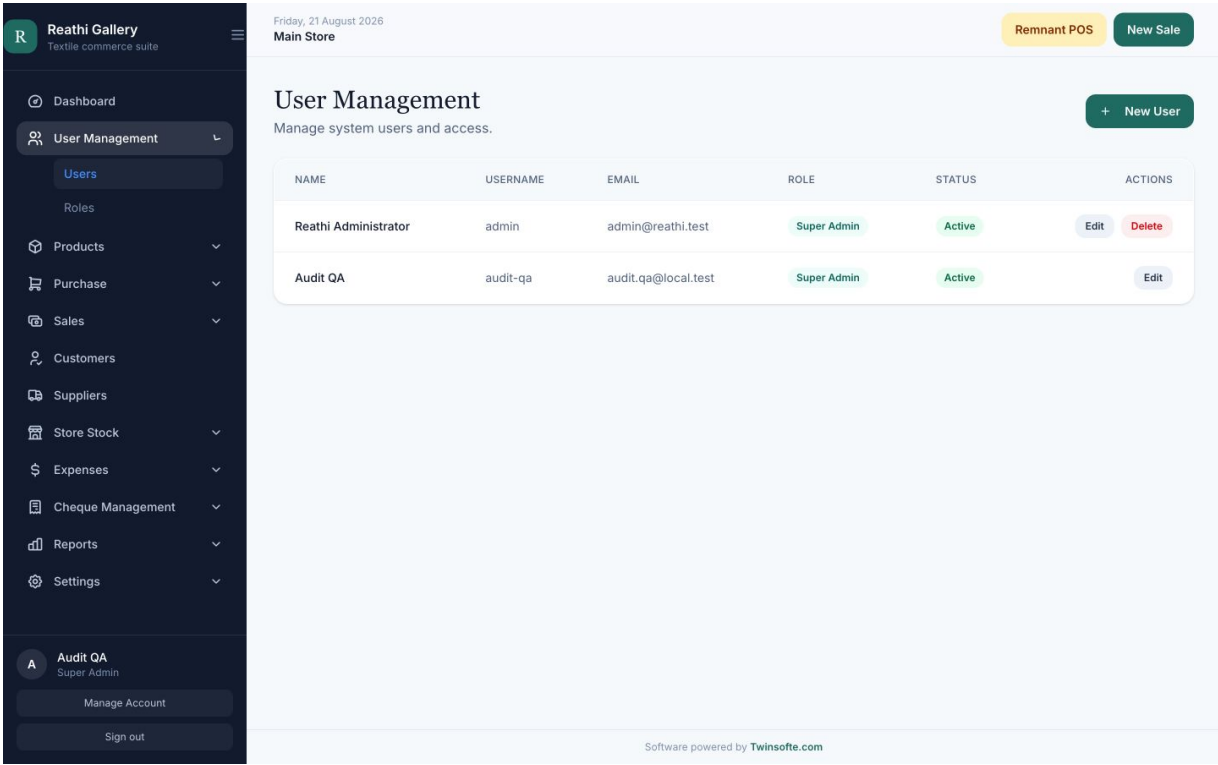

Current application screenshot

4. Creating Users

What this page does	Creates a staff login.
How to use it	Select Add user, enter identity and login fields, choose a role, then save.
Important notes	Use a unique username/email and a strong password. Give the smallest suitable role.

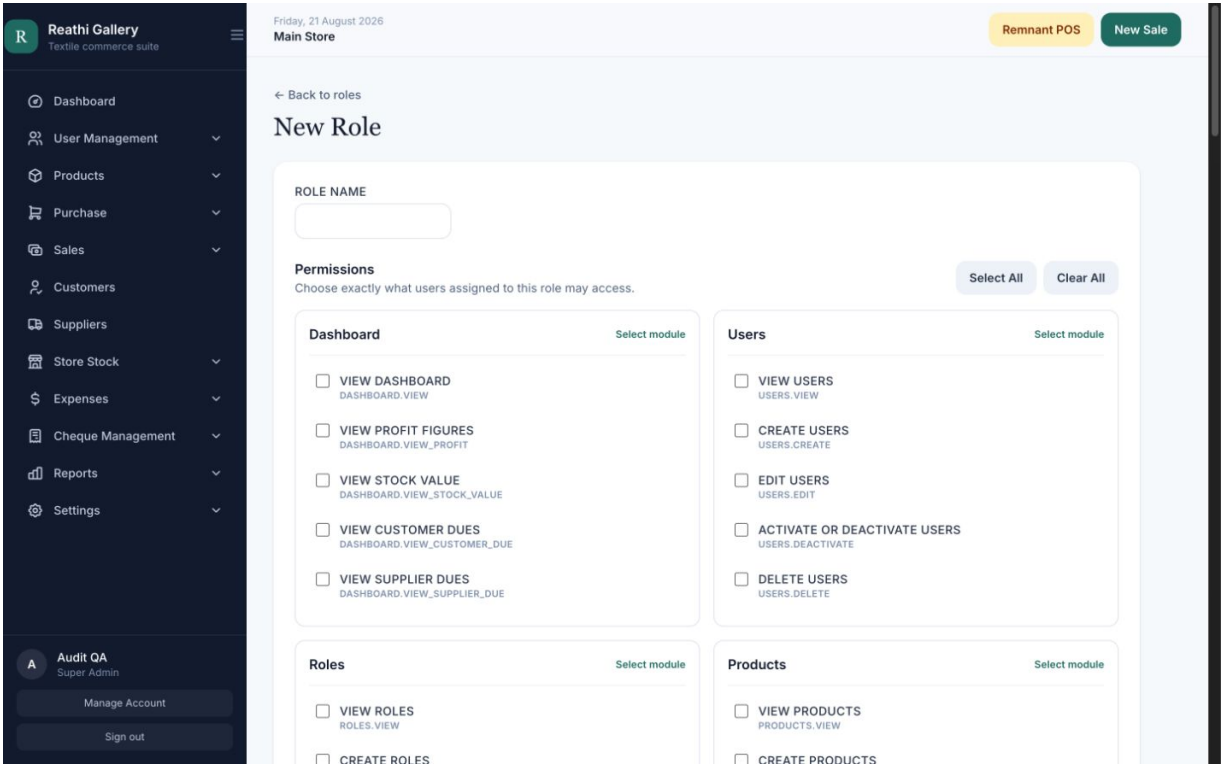

Current application screenshot

5. Roles & Permissions

What this page does	Controls exactly which modules and actions a role may use.
How to use it	Open User Management > Roles, then create or edit a role.
Important notes	Super Admin is protected. Permission checks apply in the menu, routes, and controllers.

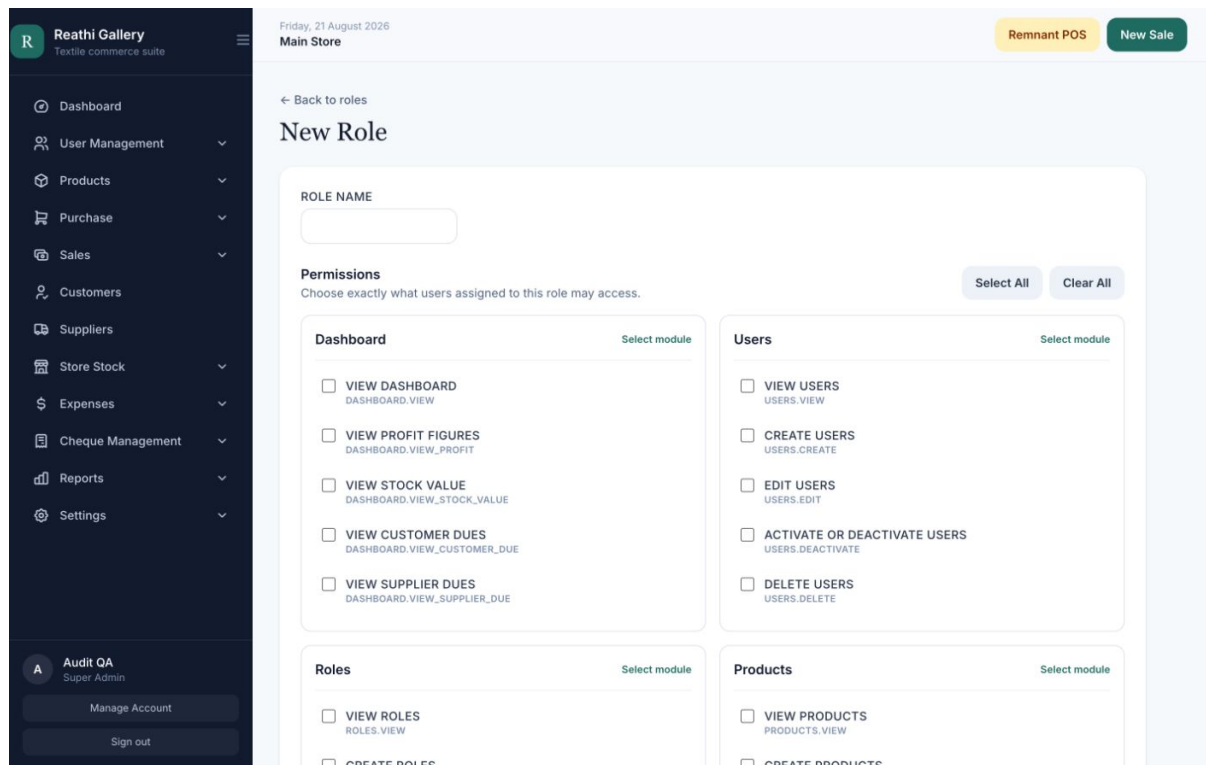

Current application screenshot

6. Creating a Role

What this page does	Creates a reusable permission profile for staff.
How to use it	Select New Role, enter a clear role name, choose permissions, and save.
Important notes	Use business names such as Senior Cashier or Stock Supervisor.

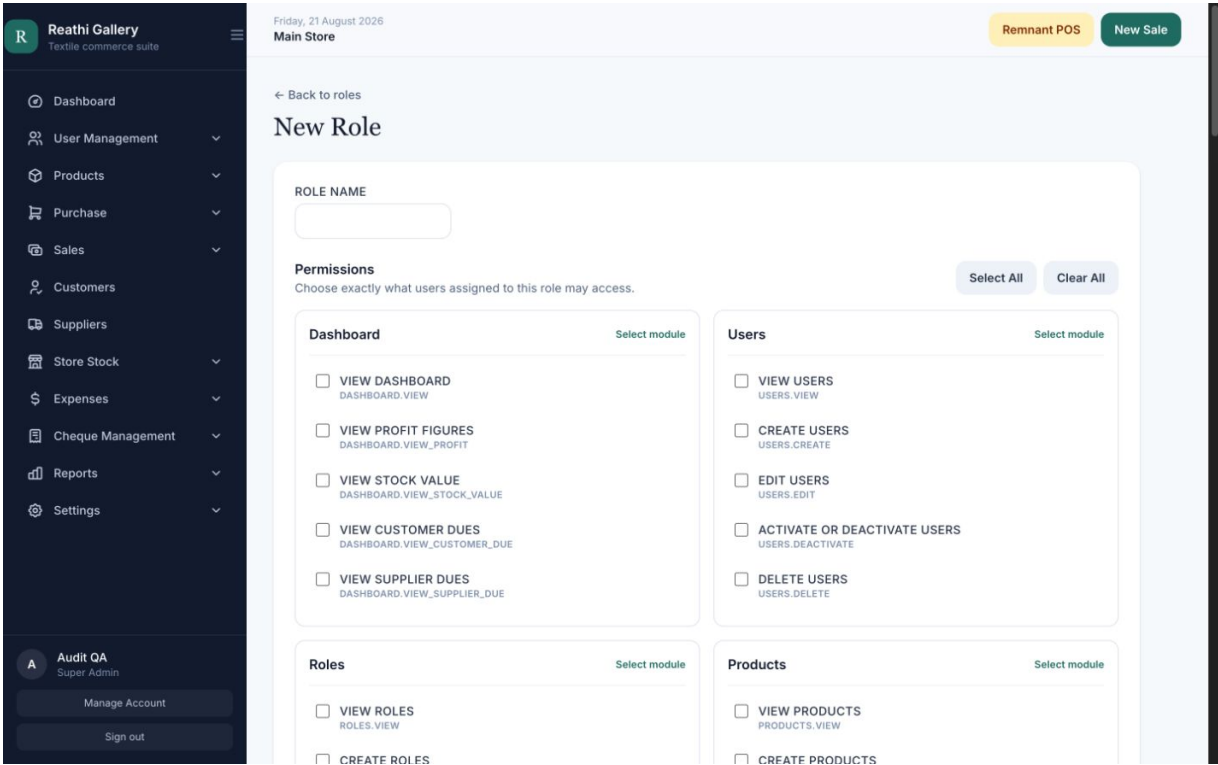

Current application screenshot

7. Giving Permissions

What this page does	Allows selected actions without giving unnecessary access.
How to use it	Use Select module for a group or tick individual permissions. Review before saving.
Important notes	Cost, profit, delete, cheque, backup, and security permissions should be tightly controlled.

Current application screenshot

What this page does	Maintains the saleable catalogue, prices, units, and stock summary.
How to use it	Search by name, SKU, or barcode. Use View, Edit, Delete, or Add product as permitted.
Important notes	Delete is blocked when a product has inventory history.

9. Categories

What this page does	Groups products for search, reporting, and POS browsing.
How to use it	Open Products > Categories, create a unique category, and keep active categories tidy.
Important notes	Do not create duplicate category names for the same business meaning.

10. Brands

What this page does	Maintains product brand names.
How to use it	Open Products > Brands, add or edit a brand, then assign it on products.
Important notes	Consistent brand spelling improves inventory filters and reports.

11. Units

What this page does	Defines base and converted units such as metre, yard, foot, piece, and dozen.
How to use it	Open Products > Units and maintain the name, symbol, decimal rule, and active state.
Important notes	A base stock unit should match how physical stock is controlled.

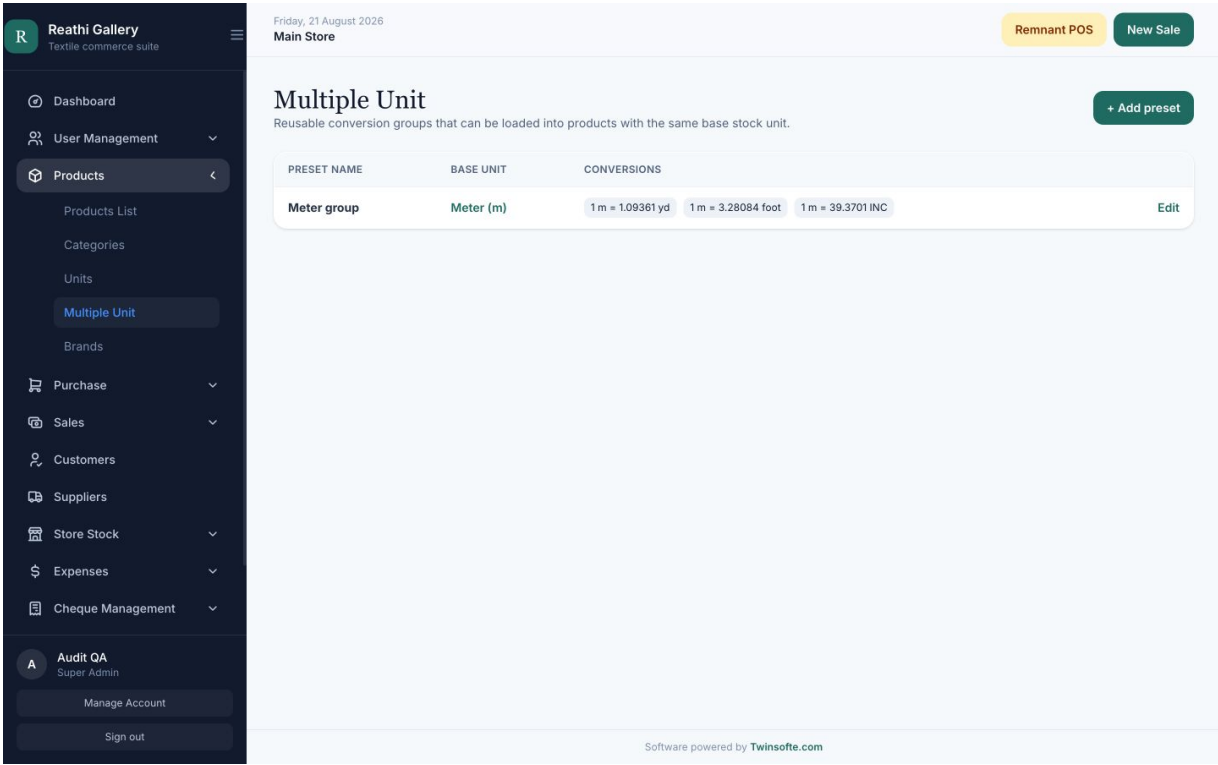

Current application screenshot

12. Multiple Units

What this page does	Saves reusable conversion groups for product setup.
How to use it	Open Products > Multiple Unit, choose a base unit, add conversions, and save the preset.
Important notes	Conversion quantity means how much converted unit equals the stated base quantity.

Current application screenshot

13. Creating Product

What this page does	Creates a product with unique SKU/barcode, prices, stock unit, and conversions.
How to use it	Enter identity details, choose the base unit, set prices, load or add conversions, then Create product.
Important notes	SKU and barcode are unique. A hidden modal can no longer block submission.

Washed	FAB-	I linen &			Rs	Rs	Rs	Rs		In	

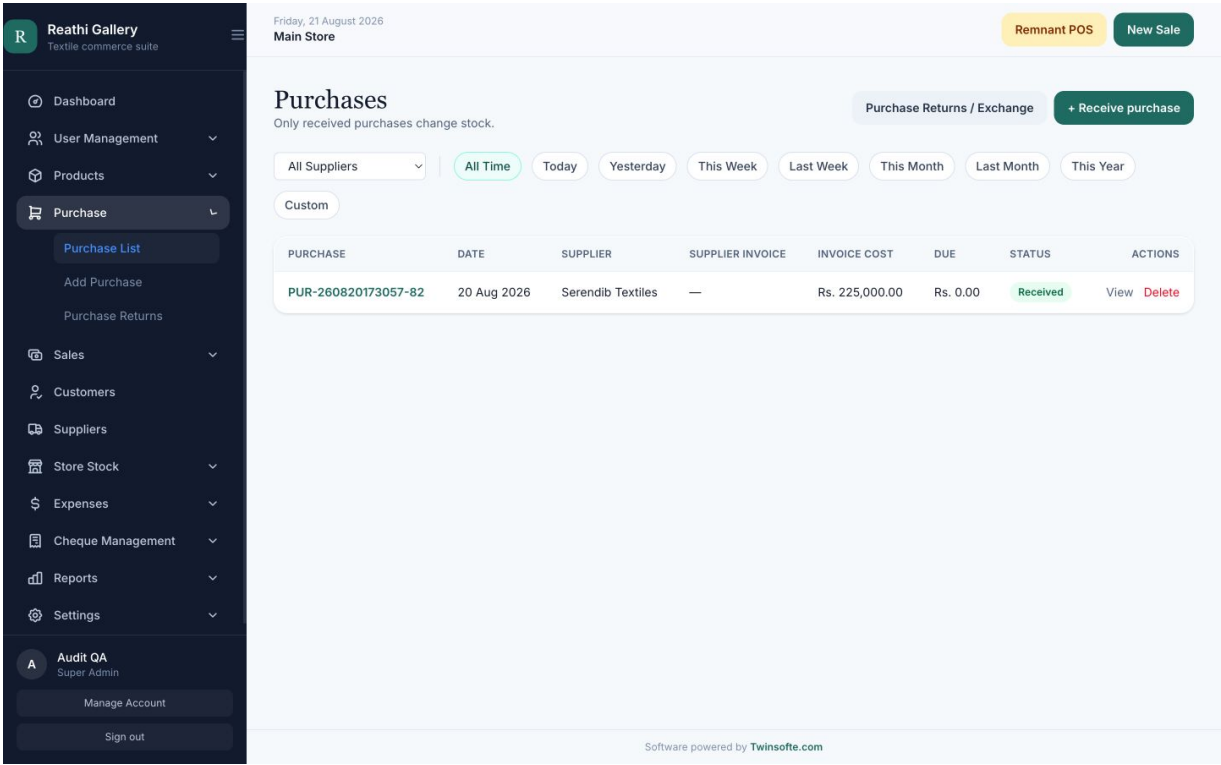

What this page does	Finds stock by product, category, brand, supplier, unit, status, quantity, cost, price, or last sale.
How to use it	Set one or more filters, select Apply filters, then export CSV or PDF if needed.
Important notes	Use Reset before starting a new search. Never-sold and date-based filters help identify dead stock.

[illegible]

16. Purchases

What this page does	Records supplier stock receipts and landed costing.
How to use it	Open Purchase > Add Purchase, choose supplier/store, add product quantities and costs, then receive or save.
Important notes	The system calculates base quantity and weighted average cost at high precision.

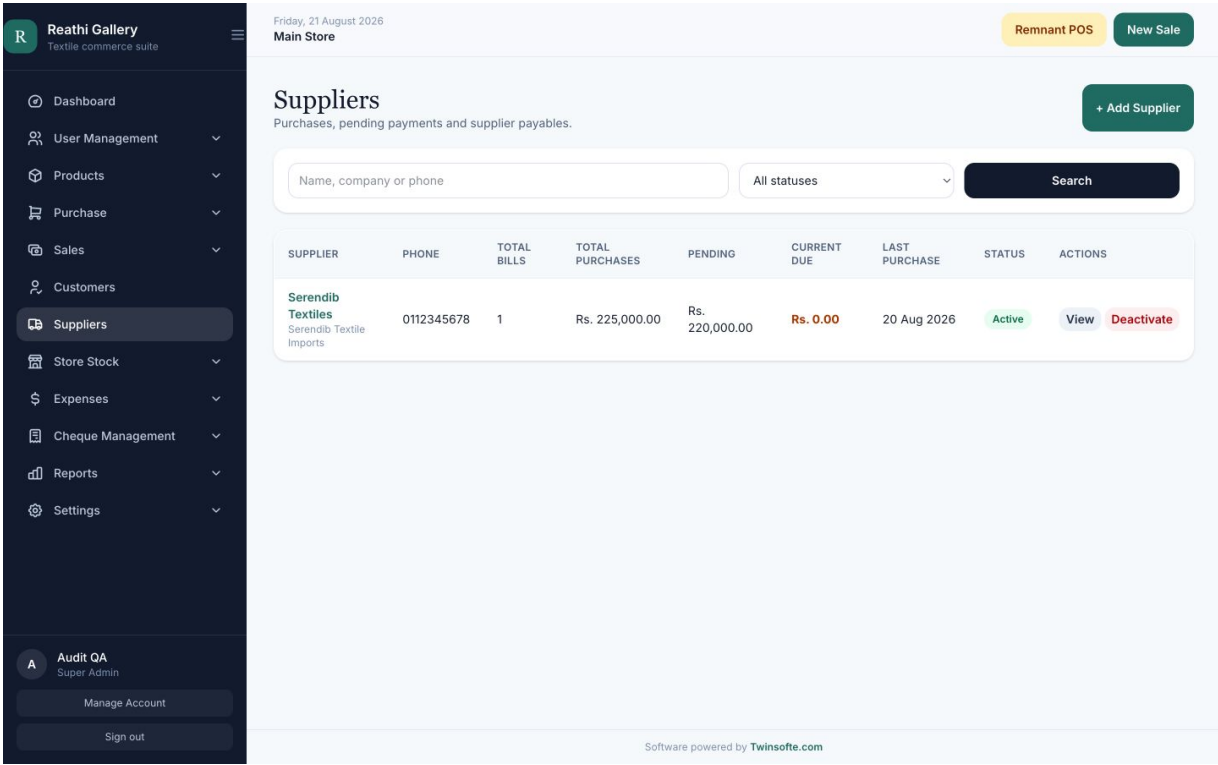

Current application screenshot

17. Supplier Payments

What this page does	Pays outstanding supplier balances using allowed payment methods.
How to use it	Open the supplier profile or purchase, select Pay, enter amount/method/reference, and confirm.
Important notes	Pending cheques must not be treated as cleared cash.

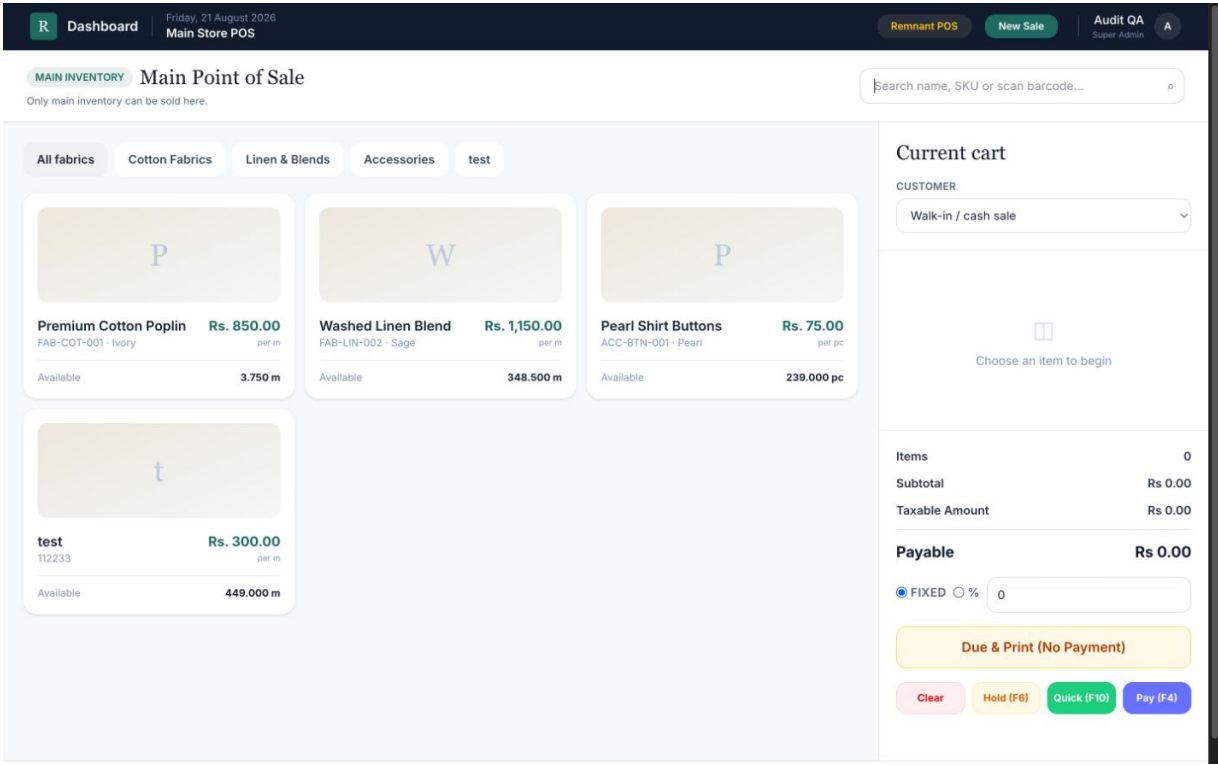

Current application screenshot

18. Main POS

What this page does	Sells from main inventory using a desktop, tablet, or phone.
How to use it	Search or scan, select a product, enter quantity/unit, review cart, then choose the payment action.
Important notes	When search has exactly one unambiguous result, it is added automatically.

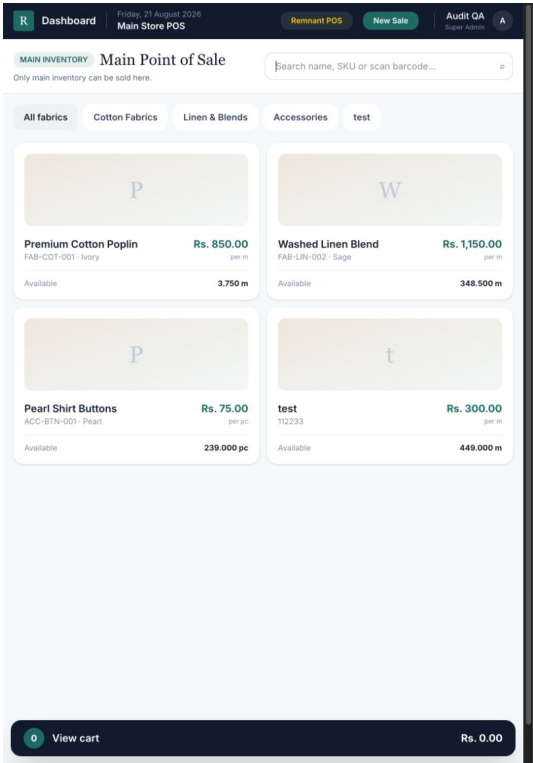

Current application screenshot

19. Selecting Meter/Yard/Foot

What this page does	Sells a product in any enabled converted unit.
How to use it	Add the product, open its unit selector, choose metre, yard, foot, or another allowed unit, then enter quantity.
Important notes	Stock is deducted in the base unit using the product conversion rate.

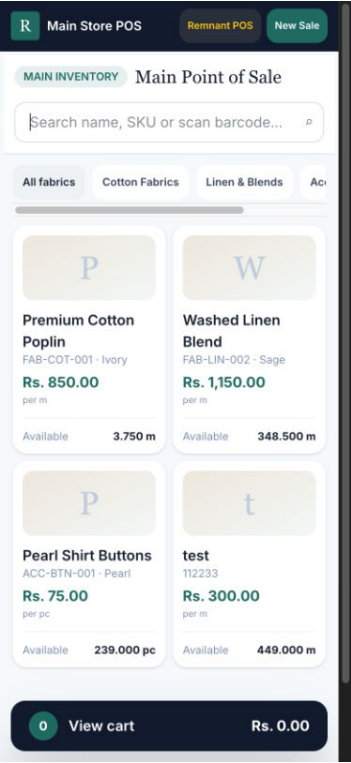

Current application screenshot

20. Decimal Sales

What this page does	Supports partial textile quantities such as 0.5 metre or 2.75 yards.
How to use it	Enter the exact decimal quantity in the selected unit and review the calculated amount before payment.
Important notes	Decimal arithmetic is stored at controlled precision to protect stock and profit totals.

Current application screenshot

What this page does	Moves cut-piece quantity from main stock into traceable remnant stock.
How to use it	Open Remnants > Transfer, choose product/source, enter quantity, price, and reason, then confirm.
Important notes	Combined physical quantity must remain the same across main and remnant stores.

22. Remnant Inventory

What this page does	Lists individual cut-piece lots with barcode, remaining quantity, cost, price, and status.
How to use it	Search by remnant/product/barcode and filter by date, status, quantity, price, or below-cost condition.
Important notes	Below-cost information requires cost permission.

Software powered by Twinsofto.com

23. Remnant POS

What this page does	Sells only available remnant lots.
How to use it	Search or scan a remnant, add it to the cart, review quantity/price, and complete payment.
Important notes	Selling below cost requires the special permission.

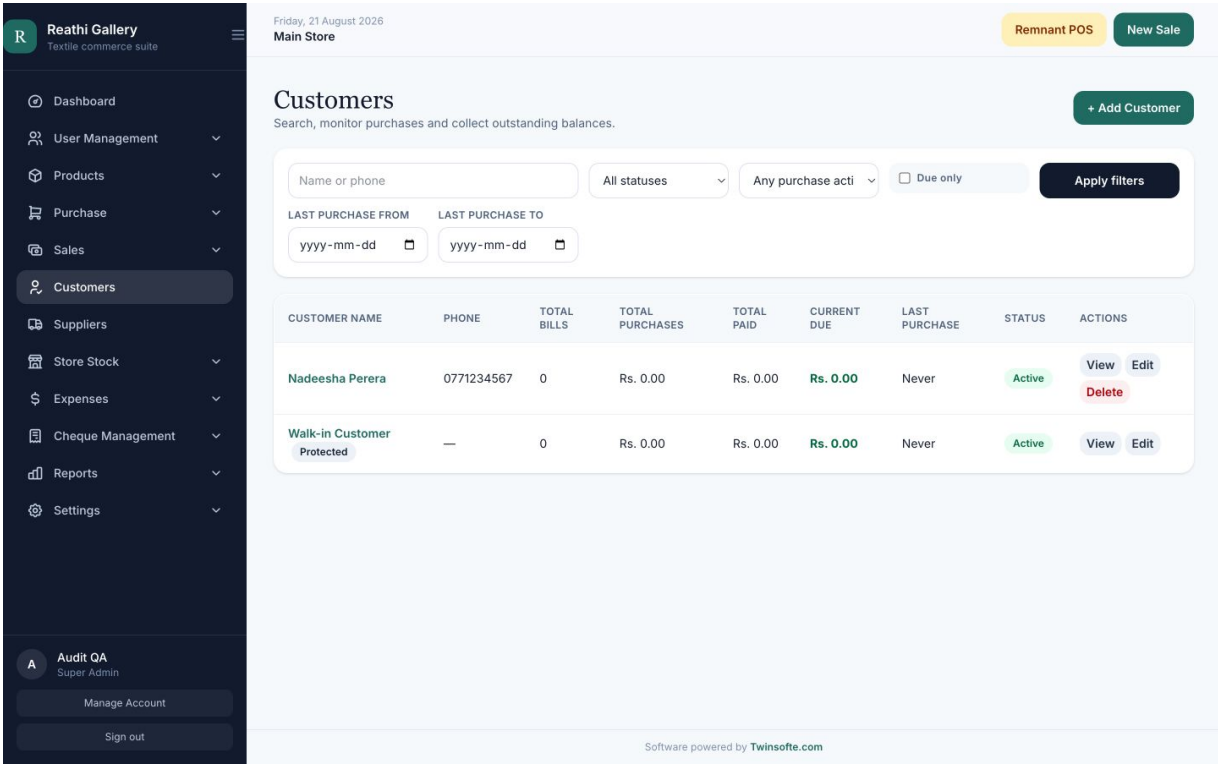

Current application screenshot

24. Customers

What this page does	Maintains customer details, credit limits, activity, and balances.
How to use it	Open Customers, search, create, edit, or open a customer profile.
Important notes	Use Walk-in / cash sale for anonymous retail customers.

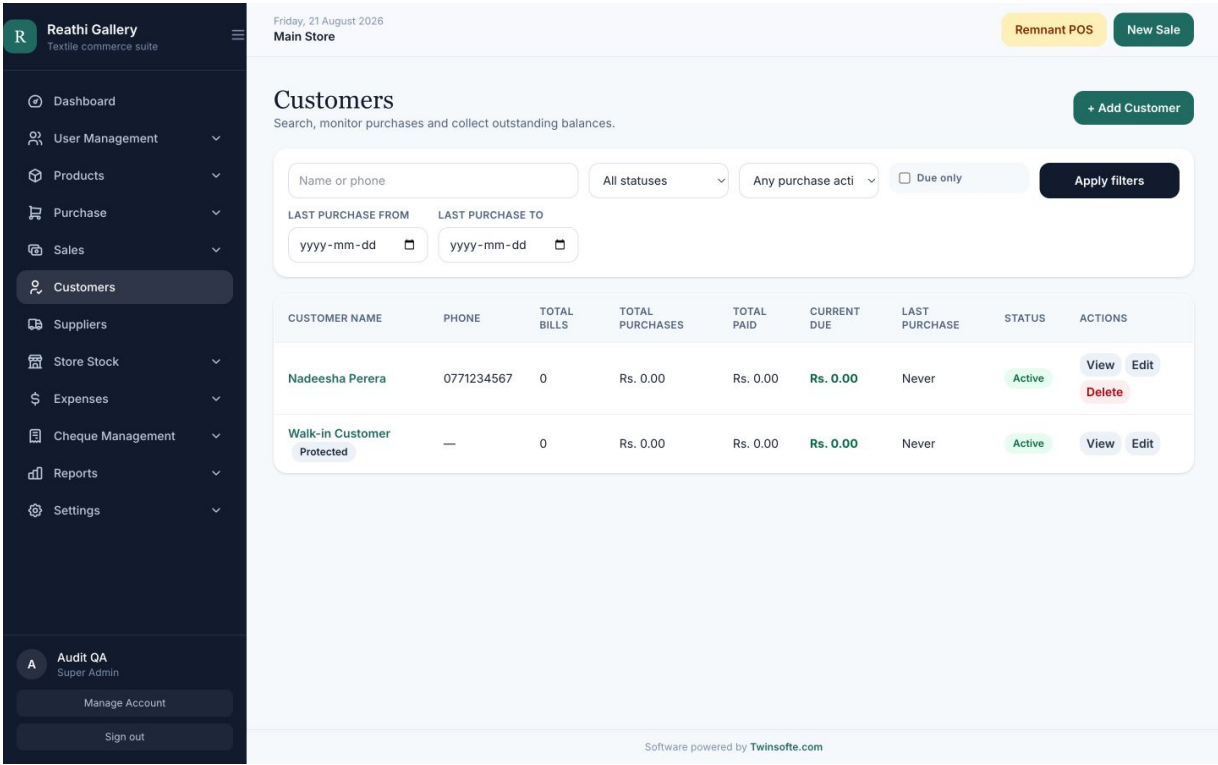

Current application screenshot

25. Customer Profile

What this page does	Shows sales, payments, pending cheques, returns, and current due.
How to use it	Open a customer from the list and review the ledger before accepting or reversing payment.
Important notes	Pending cheques are separate from cleared payments.

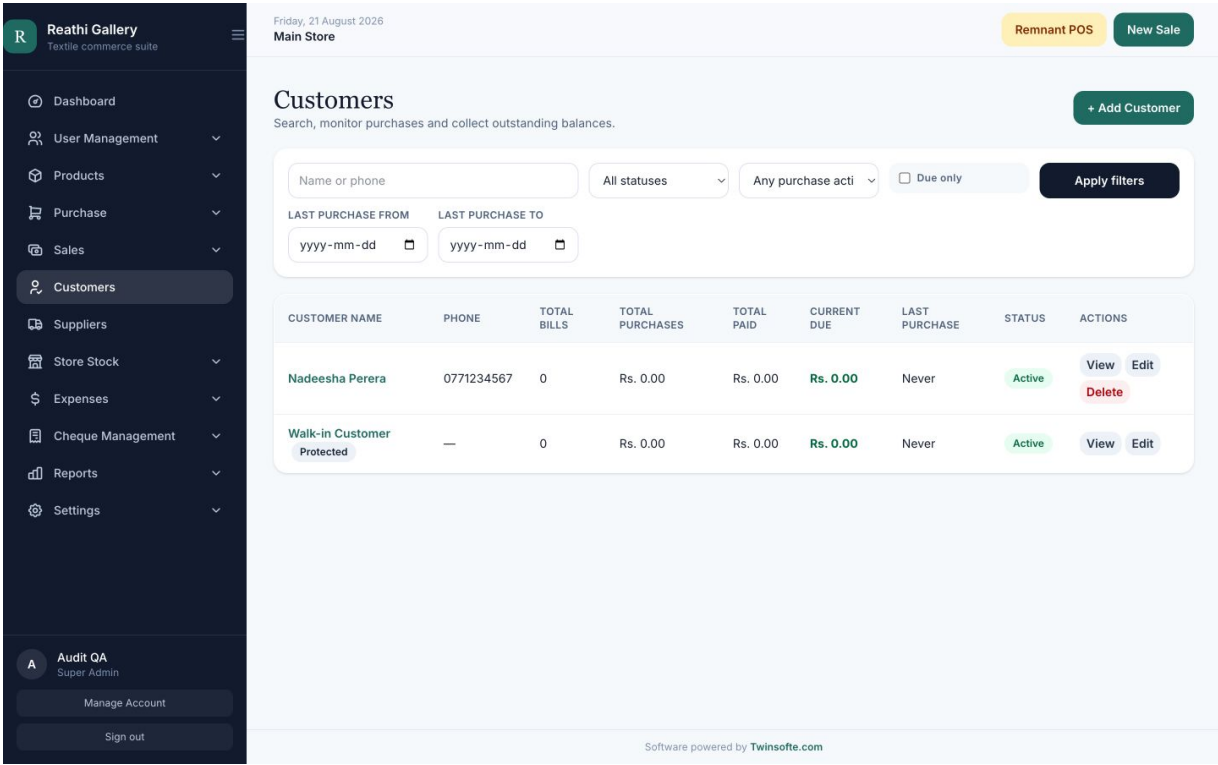

Current application screenshot

26. Customer Due Payment

What this page does	Records money received against customer due.
How to use it	Open the customer profile, select Pay due, enter amount and method, then save.
Important notes	Do not record the same receipt twice. Use cheque flow for cheque payments.

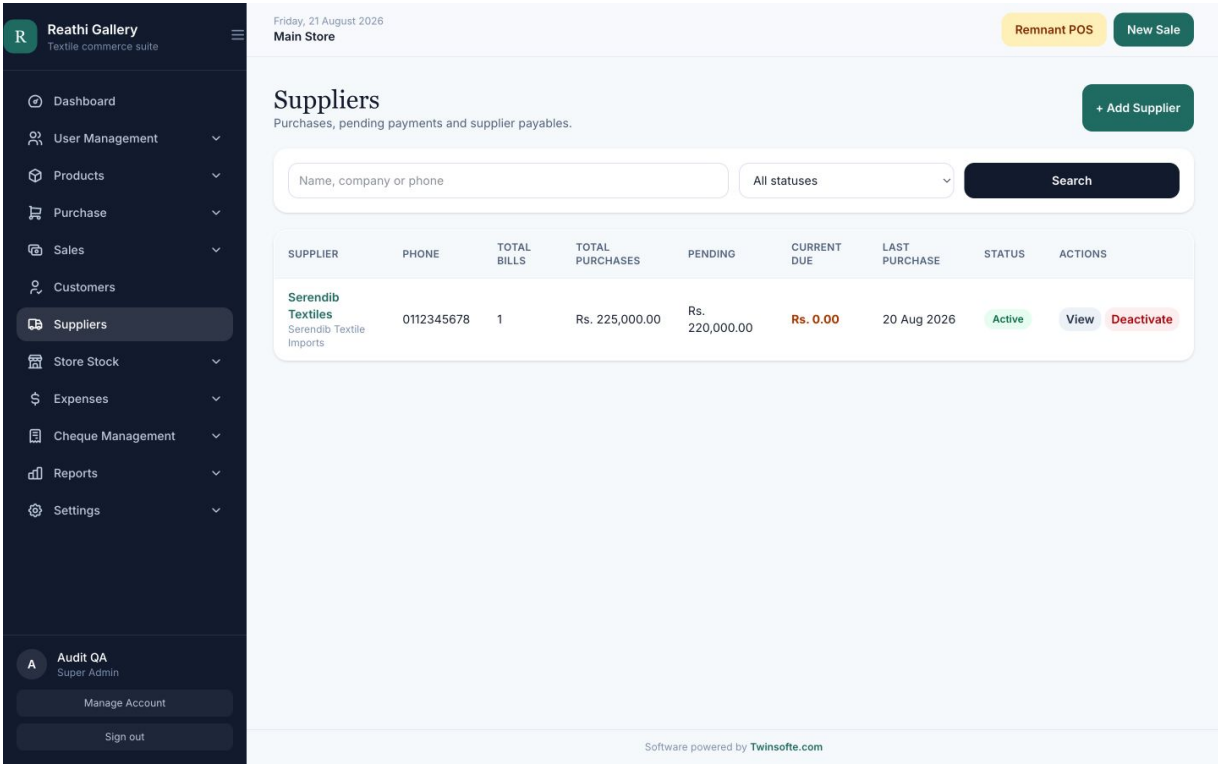

Current application screenshot

27. Suppliers

What this page does	Maintains supplier details, purchases, payments, cheques, and due.
How to use it	Open Suppliers, search or create a supplier, then use the profile for ledger and payment actions.
Important notes	Supplier due uses supplier invoice cost, not internal landed cost.

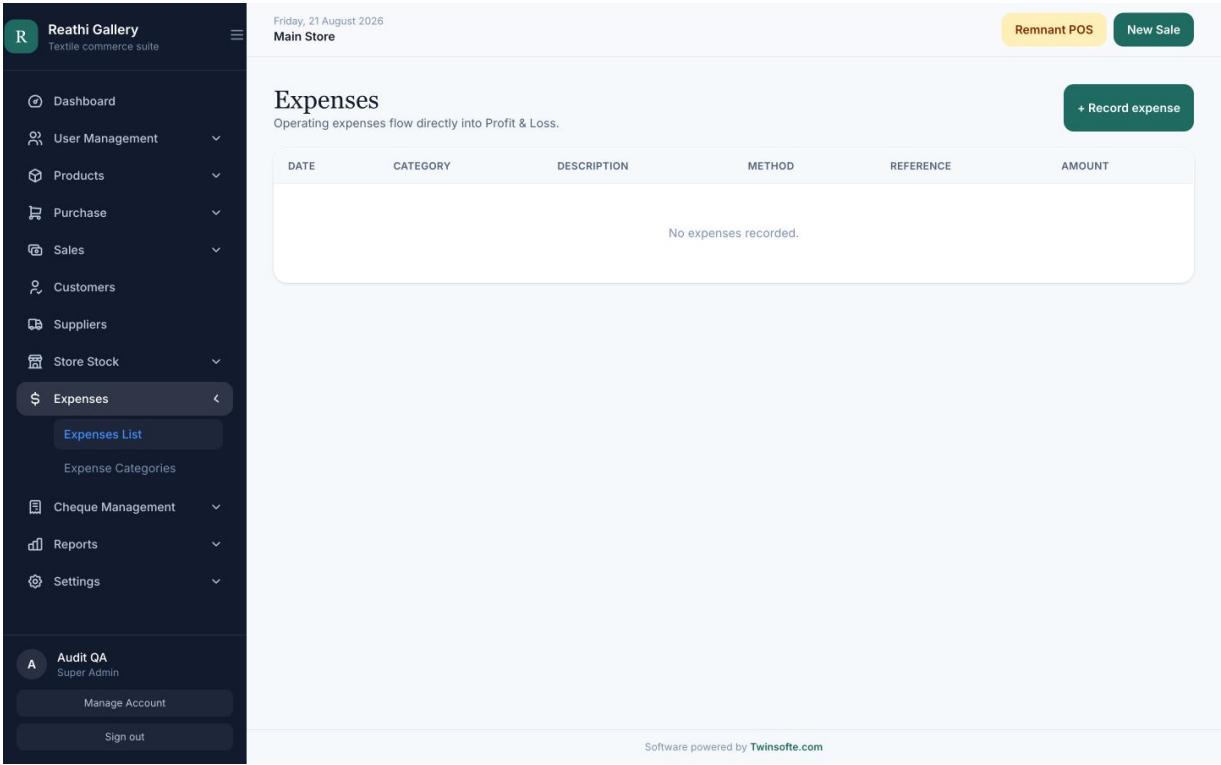

Current application screenshot

28. Expenses

What this page does	Records operating expenses used in daily closing and profit/loss.
How to use it	Open Expenses, select category, date, amount, method, and notes, then save.
Important notes	Use clear categories and references so reports remain useful.

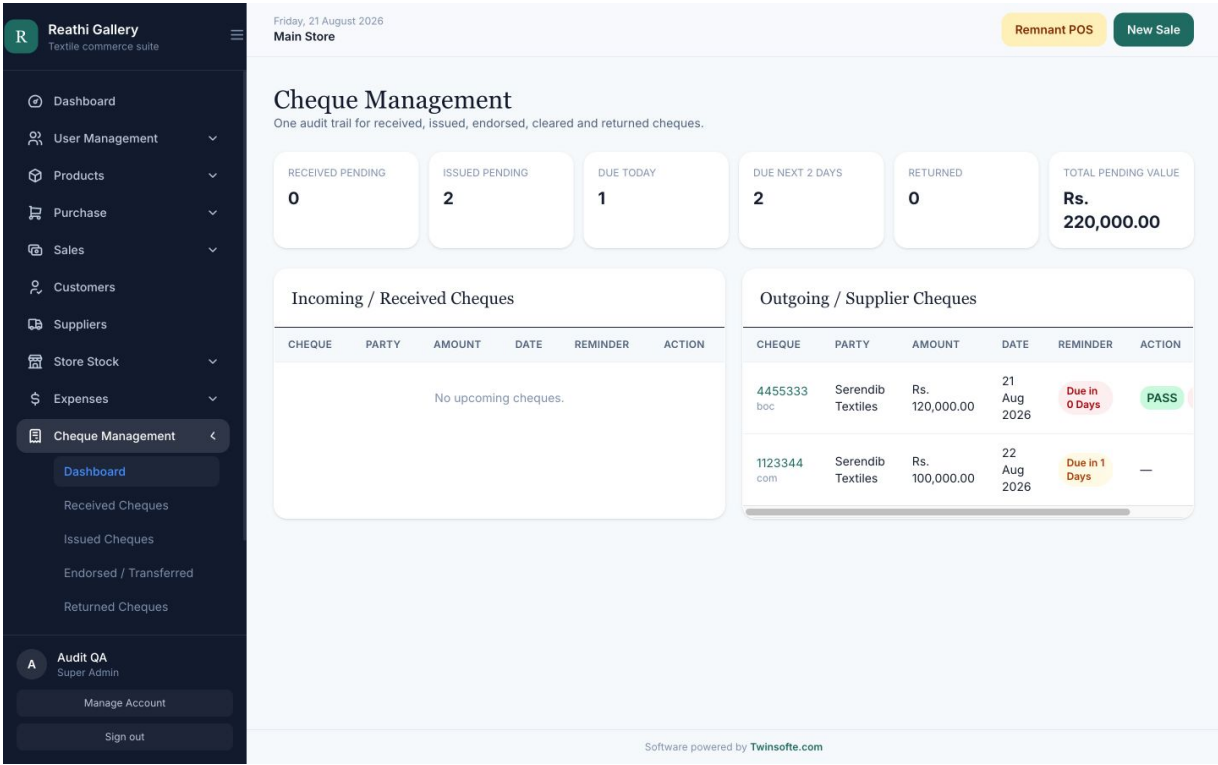

Current application screenshot

29. Received Cheques

What this page does	Tracks cheques received from customers.
How to use it	Open Cheque Management > Received Cheques and review pending, deposited, passed, or returned status.
Important notes	A pending cheque must not reduce customer due until cleared.

Current application screenshot

What this page does	Tracks cheques issued to suppliers.
How to use it	Open Issued Cheques, record or review the cheque, payee, amount, bank, and dates.
Important notes	Do not treat an issued cheque as cleared until it passes.

Software powered by Twinsoft.com

31. Endorsed Cheques

What this page does	Transfers a received cheque to a supplier.
How to use it	Open an eligible received cheque, choose Endorse, select supplier, and confirm.
Important notes	The same cheque links both customer and supplier accounting; it is not duplicated.

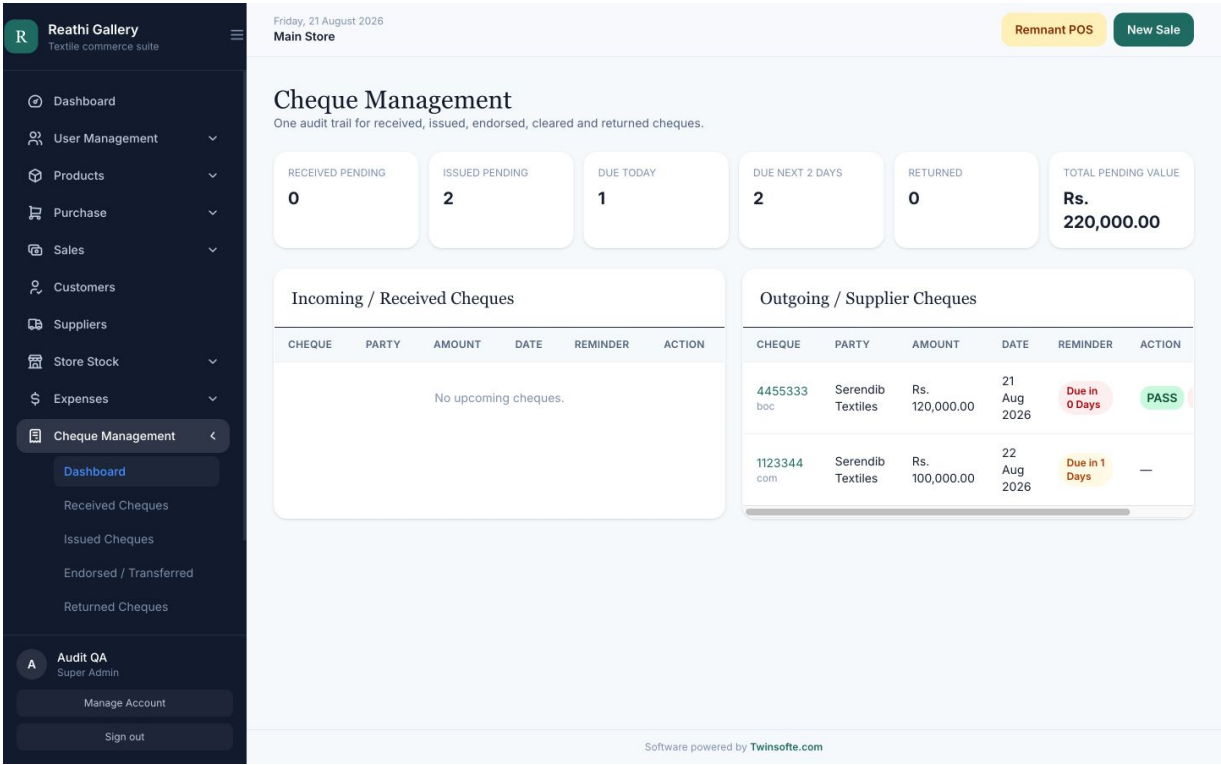

Current application screenshot

32. Passing Cheque

What this page does	Marks a cheque as cleared exactly once.
How to use it	Open the cheque and choose Pass/Clear after bank confirmation.
Important notes	Double-pass protection prevents duplicate ledger entries and duplicate due changes.

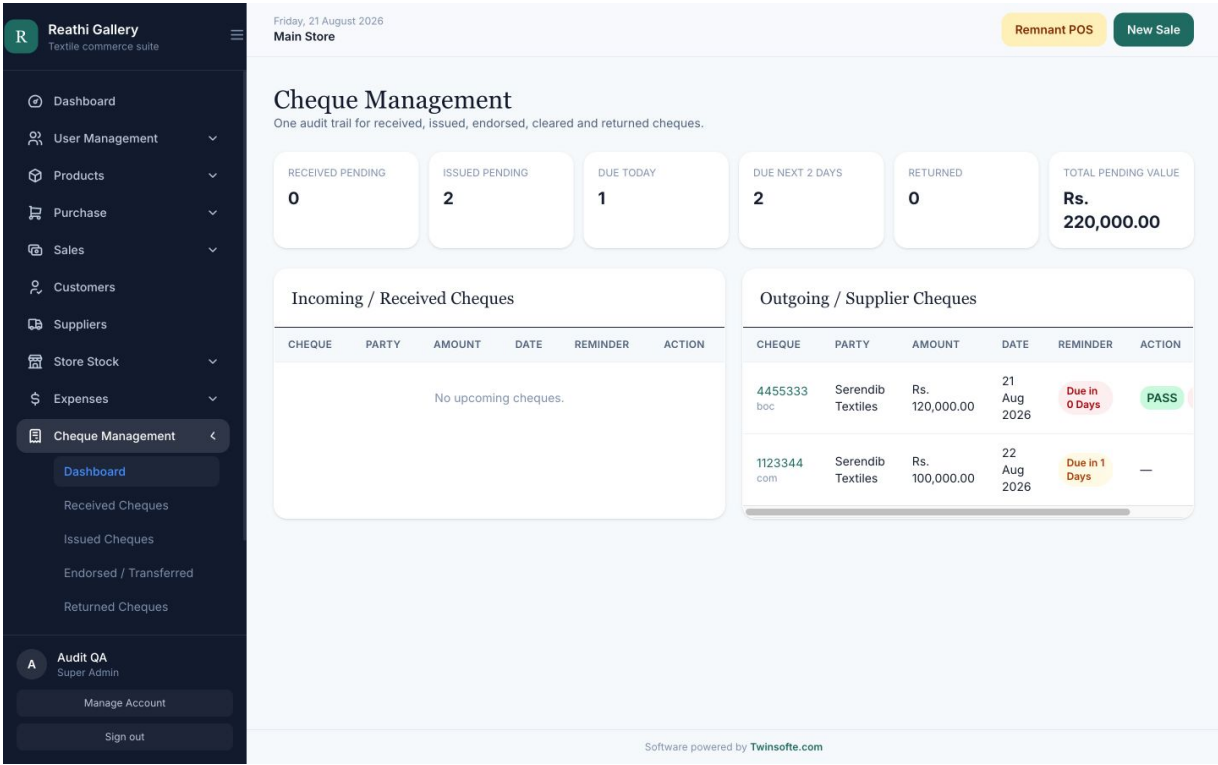

Current application screenshot

33. Returning Cheque

What this page does	Reverses the correct customer or supplier effect when a cheque is dishonoured.
How to use it	Open the cheque, choose Return, enter the return date/reason, and confirm.
Important notes	Verify the correct party due is restored after return.

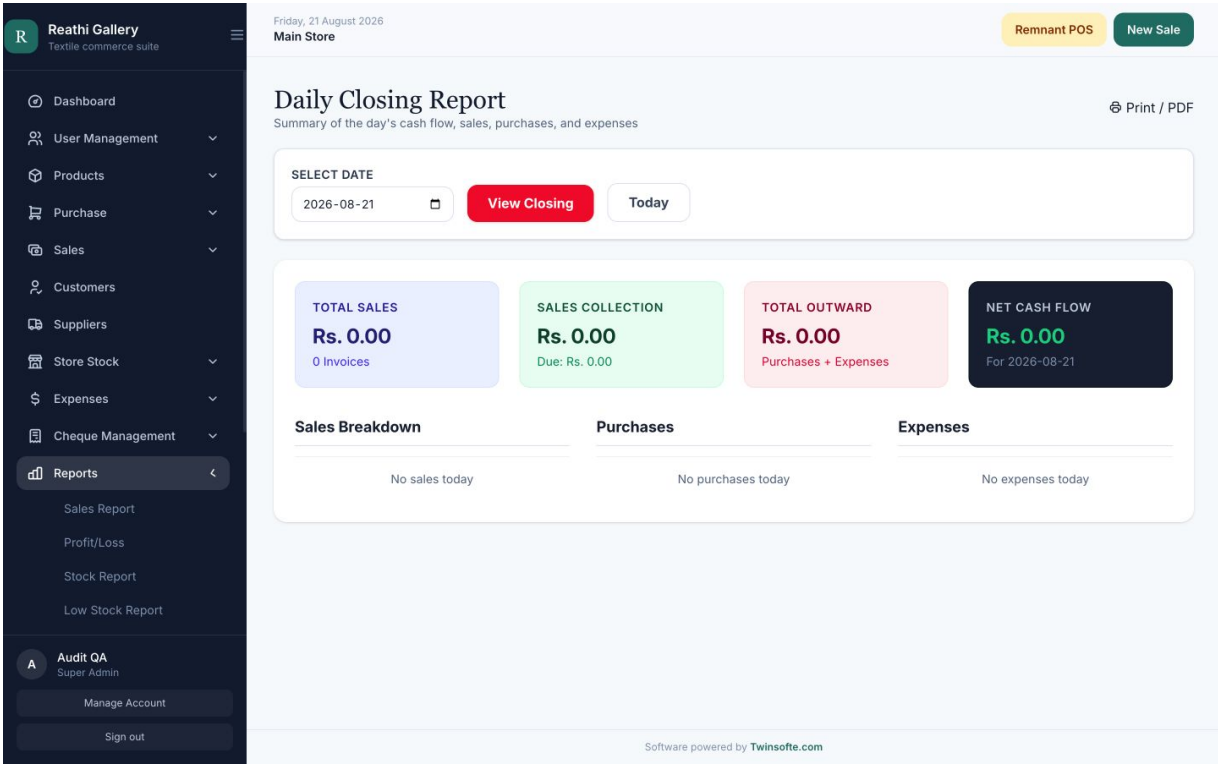

Current application screenshot

34. Reports

What this page does	Provides sales, purchase, stock, profit/loss, due, cheque, expense, and dead-stock analysis.
How to use it	Open Reports and choose the required report. Set filters, review totals, then export where available.
Important notes	Cost/profit reports require the matching permission.

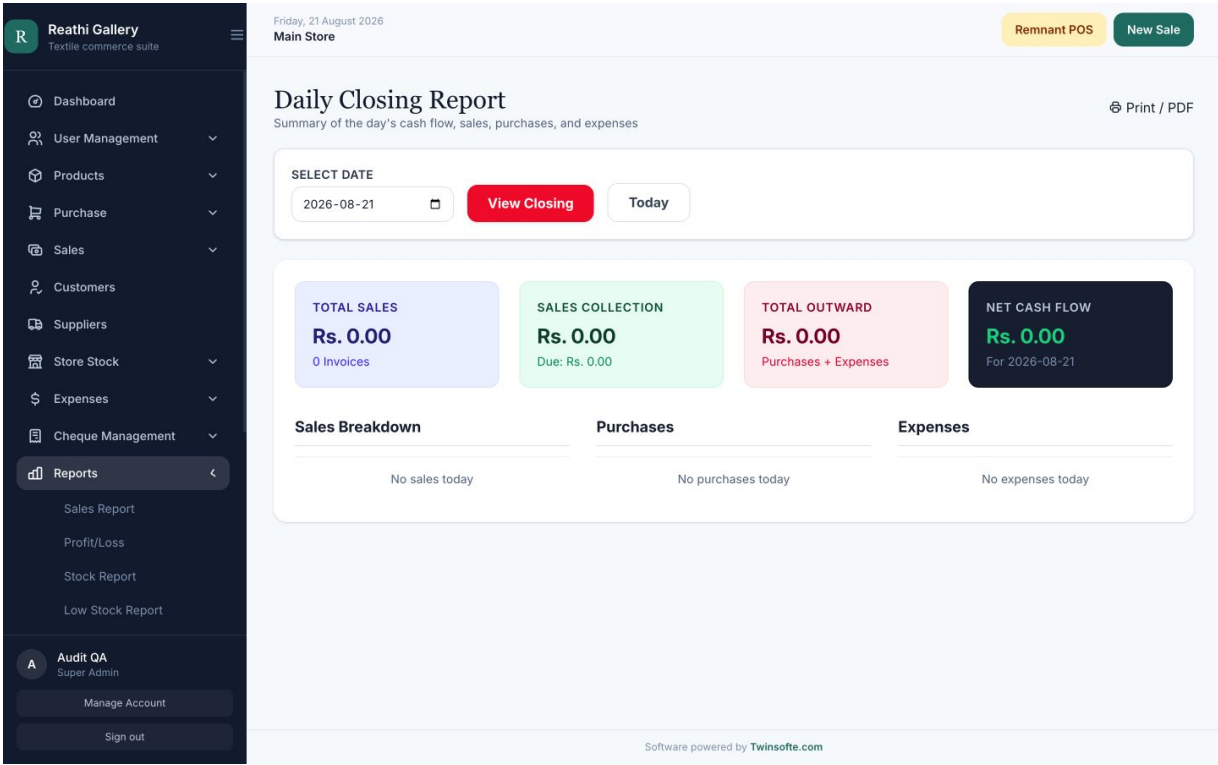

Current application screenshot

35. Daily Closing

What this page does	Compares daily sales, collections, expenses, returns, expected cash, actual cash, and difference.
How to use it	Open Reports > Daily Closing, choose the date, enter actual cash when required, and review the difference.
Important notes	Investigate any difference before closing the day.

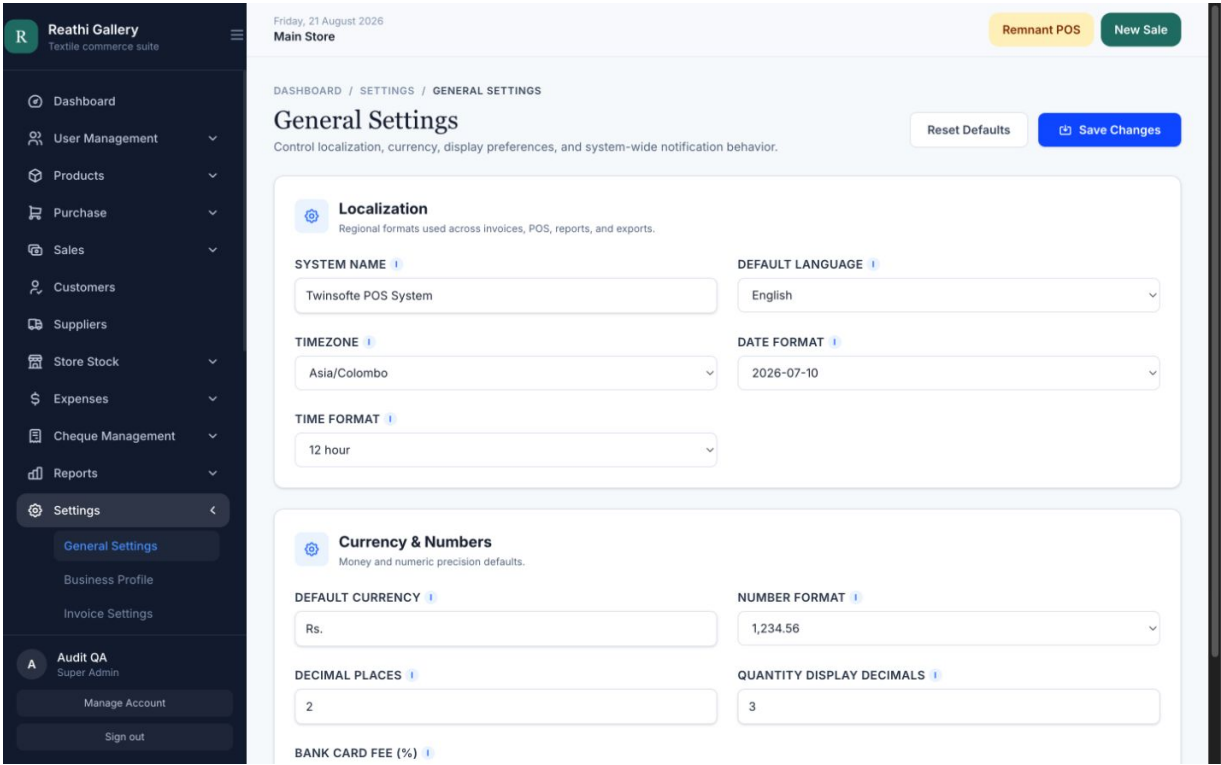

Current application screenshot

36. SMS Invoice

What this page does	Sends or shares invoice information through the configured gateway or public bill link.
How to use it	Enable the approved gateway in Settings, verify the mobile number, then send from the invoice flow.
Important notes	Live delivery requires real provider credentials. Never expose gateway passwords in pages or logs.

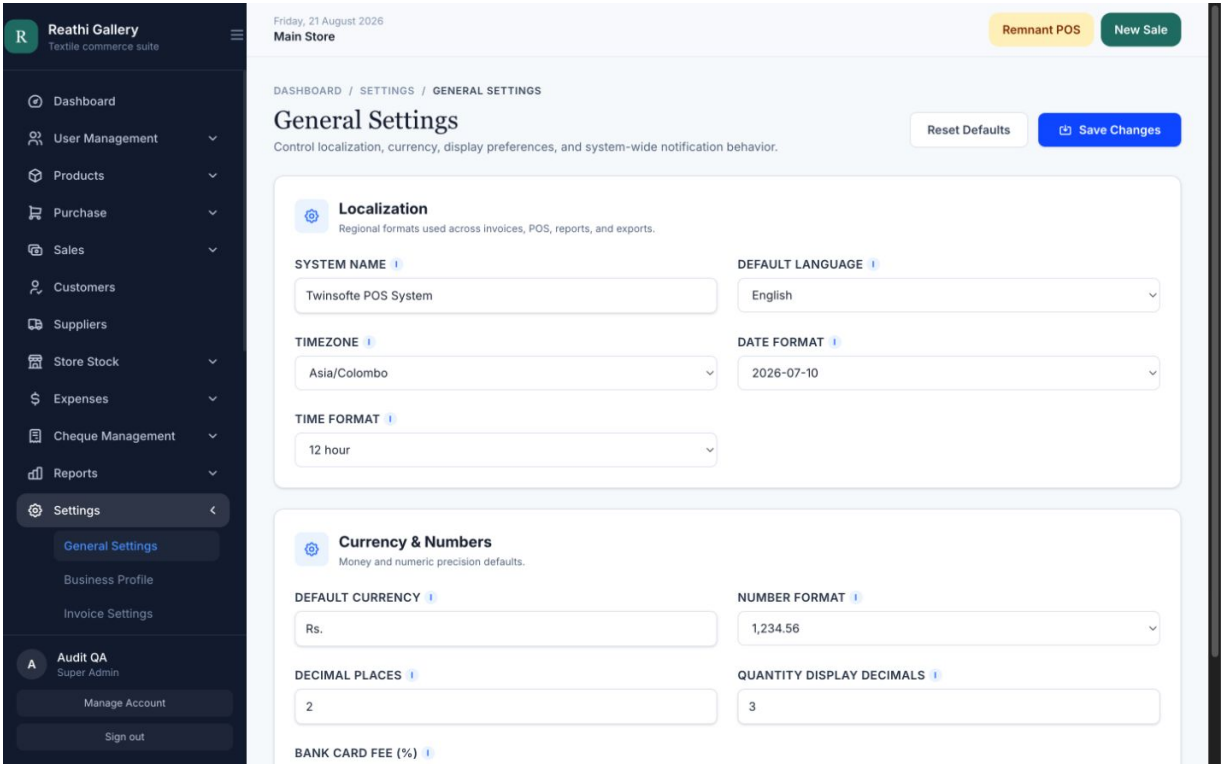

Current application screenshot

37. Settings

What this page does	Controls business, invoice, POS, product, stock, sales, payment, SMS, report, and audit behavior.
How to use it	Open Settings, choose a section, change only authorized values, save, and reload to verify.
Important notes	Security, backup, and audit settings should be restricted to senior administrators.

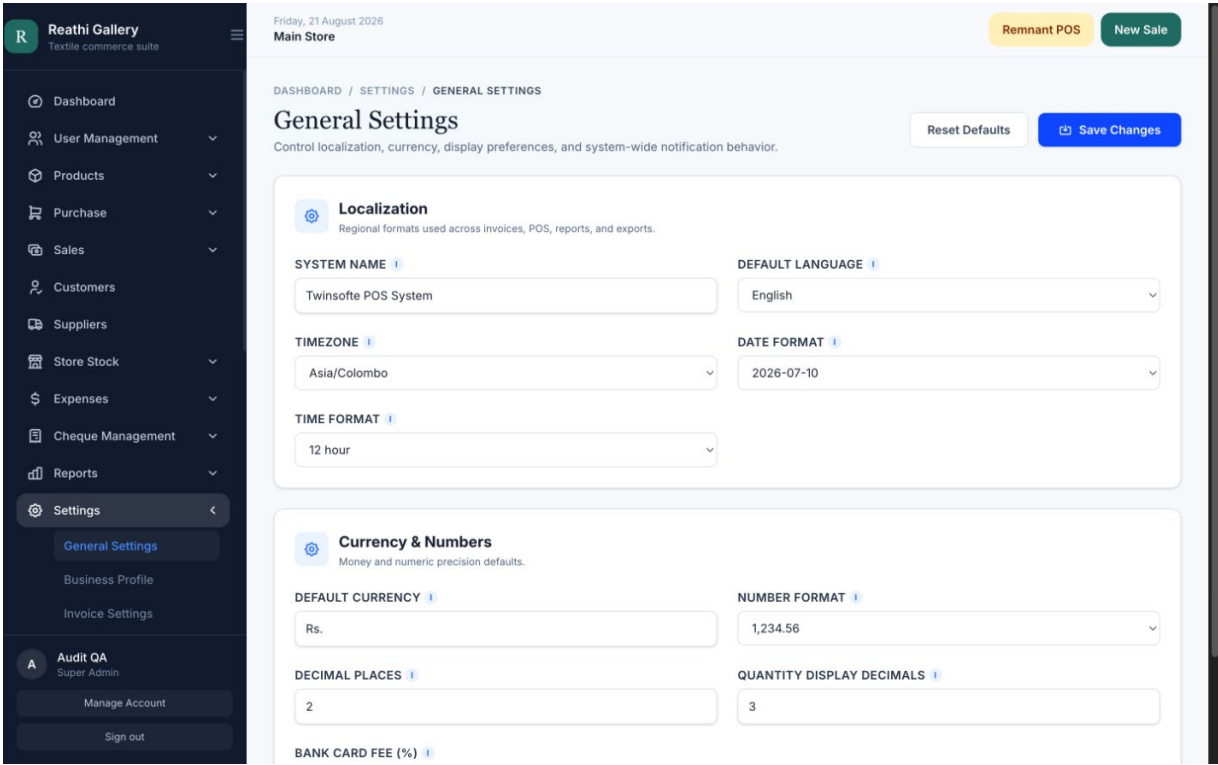

Current application screenshot

38. Backup

What this page does	Protects business data and uploaded files.
How to use it	Open Settings > Backup or use the production backup schedule. Store copies off the application server.
Important notes	Test a restore regularly. A backup that has never been restored is not fully verified.

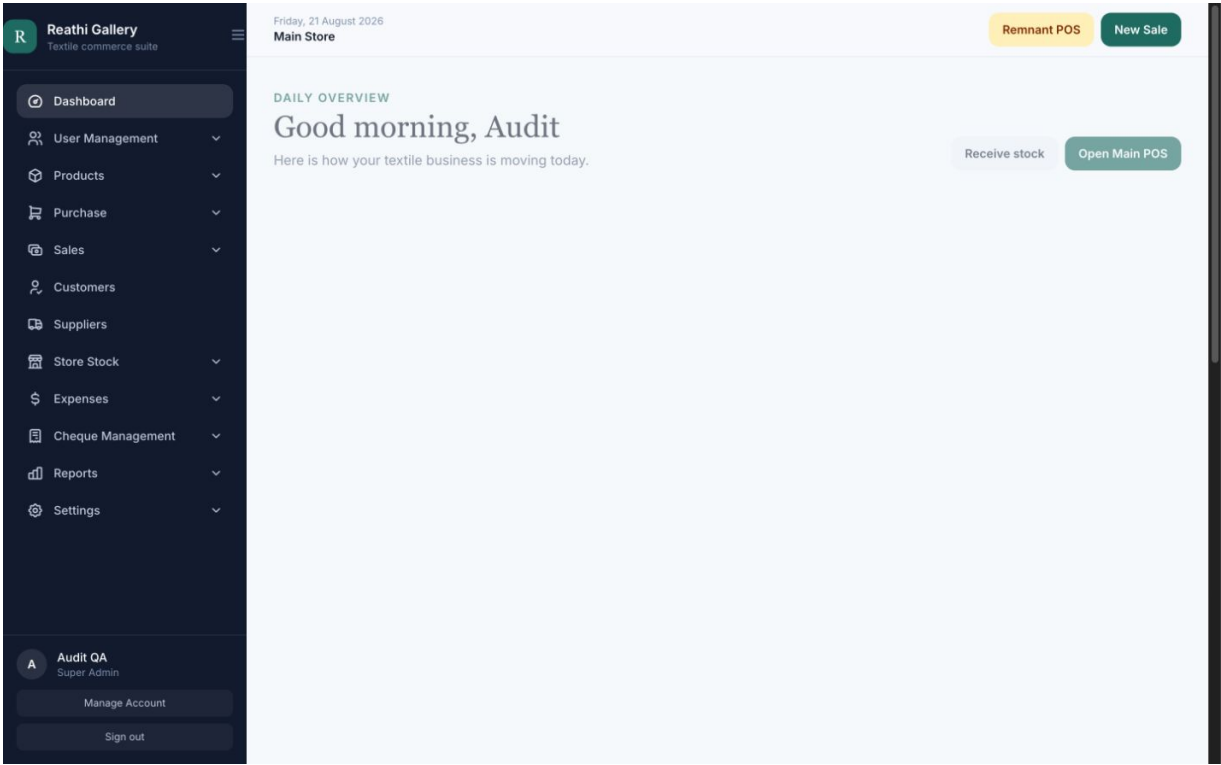

Current application screenshot

39. Logout

What this page does	Ends the staff session on the current device.
How to use it	Select Sign out at the bottom of the sidebar. Confirm the login page appears.
Important notes	Always sign out on shared devices.

Current application screenshot

END OF MANUAL

Operate carefully. Keep the audit trail.

Use the companion Excel workbook for the full permission matrix, test IDs, defect ledger, and expected-versus-actual verification tables.

	READY FOR PRODUCTION	No critical application issue remains after final regression.
--	----------------------	---
